Notes. PART NO. = manufacturer order code (tray); verify firmware revision and sector format (512e / 4Kn / 512n) against the host RAID card before quoting — mixed formats cannot share a vdev. SAS drives will not seat on a SATA-only backplane; sort trays by interface before shelving. Used SSD: read SMART percentage-used and reject units above 80% worn; used HDD: run a SMART long self-test and reject units above 40,000 power-on hours. DDPD = drive writes per day at rated capacity; RPM = spindle speed. Spot prices excluded: AI-driven nearline and enterprise-SSD shortage pushed 2026 lead times out sharply; quote validity should not exceed 7 days. QTY intentionally left blank for on-hand stock-taking.
