Notes. PART NO. = Broadcom 05-xxxx-xx MPN, Microchip / LSI retail part number, or OEM (HPE / Dell / Lenovo) option number. Verify backplane connector before quoting — MegaRAID / HBA 9400 series uses SFF-8643 Mini-SAS HD, while 9500 / 9600 and OEM Gen11 cards use SFF-8654 SlimSAS; the two cable families are not interchangeable. Tri-Mode (SAS / SATA / NVMe) applies to Broadcom 9400 and later, Microchip SmartRAID 3200 and OEM Tri-Mode SKUs; the legacy LSI 9200 series is 6Gb/s SAS / SATA only and cannot see NVMe. MegaRAID and SmartRAID cache cards need a CacheVault (CVPM05) or supercapacitor module to keep write-back cache protected — on pulled stock this module is frequently missing, so confirm its presence before quoting. OEM-branded controllers may carry platform-locked firmware and are not interchangeable with retail Broadcom equivalents. Spot prices excluded; quote validity ≤ 7 days. QTY intentionally left blank for on-hand stock-taking.
