Notes. Part numbers are manufacturer original ordering codes. Verify rank configuration and speed against the server QVL before quoting — DDR5-5600 and DDR5-6400 modules down-clock safely on earlier platforms, but 4Rx4 / 8Rx4 high-density (3DS) modules require explicit platform support. LRDIMM and RDIMM must not be mixed within a channel. Spot prices are intentionally excluded: DDR5 contract prices rose sharply through 2026 on HBM capacity reallocation, so quote validity should not exceed 7 days. QTY intentionally left blank for on-hand stock-taking.
